New Experience on Platemaking

New experience of platemaking with traditional plate

The most outstanding advantage of the Hambleside Ctcp is that it can use conventional printing plates for direct plate platemaking.

Ctcp technology could dominate most of the CTP market in West Africa. By using conventional plates and chemicals, the Ctcp solution is looking to become a typical plate making method across Africa. Let's have a look into the Hambleside Ctcp machine from the UK and appreciate its unique strength of plate making with conventional plate.

Low cost - Simple and elegant appearance

The modern exterior design of the Hambleside Ctcp looks well-designed and feels solid and strong.

Significant cost advantage

Superior in functions and favourable when considering in overall cost, the Hambleside Ctcp is highly cost-effective. Compared to the conventional plate-making process, and other CTP systems. Ctcp saves not only manpower, material resources and financial resources by eliminating a series of steps, such as film outputting, plate makeup, exposure, developing, etc, but also relieves the cost pressure of using a CTP plate.

Maintenance

In addition, the high-quality key parts of Ctcp reduce the cost of maintenance, and being upgradable, enable printing companies who don't have too much money to buy devices initially and need to upgrade their devices after growing their output capacity. It's not exaggerating to say that the Hambleside Ctcp is one of the lowest cost CTP solutions on the market. We are expecting an increase in interest and sales.

Lagos Visit - November '14

Following Stephen Harris' 1st visit to Lagos in November last year and looking forward to his next trip shortly, Hambleside are now seeing a significant increase through our web site enquiry section demand for good quality refurbished print equipment.

This is particularly prevalent in the pre-press equipment arena, where we are seeing lots of enquires for our refurbished Violet technology CTP systems and our inkjet CTP systems.

The range Hambleside has to offer in CTP solutions, now makes the decision to move from conventional film platemaking to Computer to plate (CTP), very affordable, especially with the falling demand of film that has now stopped the development and manufacture of new imagesetters.

Major global manufacturers of film have stopped producing film and are concentrating on CTP plate manufacturing.

...continued on page 2

...continued from page 1

Hambleside can supply solutions for producing film without the need of imagesetter, chemicals and dark room if required.

"I would like to thank the many companies that gave me time to meet with me, It was a pleasure meeting them and learning more about the Lagos print market requirements and following up on their enquires. It was also a great pleasure to personally deliver an order to Mr Peter Oyeladun of Pomat Peters Nigeria Limited (above) a new customer of Hambleside International".

A Wide Choice of Printing Blankets for your presses

The choice of printing and coating blankets plays a crucial role in determining the quality of the finished printed product. Hambleside has a diverse selection of high quality printing blankets and coating blankets designed to achieve the perfect printed image and enhance the process of printing on presses.

Exact dot reproduction; rich, even solids; quick sheet and web release; and reduced piling - all of this is achieved with the aid of Hambleside blankets. Excellent smash resistance and gauge stability guarantee top performance. And this quality pays off, as printers who use optimum printing and coating blankets work much more efficiently and economically!

Additional value from Hambleside includes technical information on machine packing requirements and torquing numbers.

HOT DEAL!! Hambleside CTP Scrappage Scheme

Hambleside wants to help customers upgrade their pre-press systems with the introduction and launch of the Hambleside Imagesetter scrappage scheme.

Huge savings are available when you scrap your old imagesetter and buy a CTP system from Hambleside. If you currently own a Imagesetter that is old, broken, high maintenance, irreparable, rendered useless due to obsolete parts or becoming expensive to run then it qualifies for the Hambleside Scrappage Scheme.

If you register an interest on our website - to replace your imagesetter in 2015 with a Hambleside CTP System, you could receive up to £5,000 towards your CTP system. Because CTP technology is now widely accepted globally, the market of the traditional plate making equipment and the consumable materials are greatly shrinking.

The manufacturing of film related equipment is slowing down or stopped its production already. This affects a range of equipment including the imagesetters, film processors, plate processors, plate exposure systems. According to some industry experts, film production will no longer exist in the future with some major global manufactures already pulling out of manufacturing film already.

Conventional plate production featured by imagesetter, film and PS plate will not be able to keep its position in pre-press industry for much longer, the sales turnover of computer to plate machines and related products such as inkjet imaging systems are experiencing tremendous growth globally.

Whilst conventional methods using film are declining and internationally renowned pre-press suppliers and plate manufacturers have all developed full line of CTP products.

Computer to Plate technology's time has come. It was only just over 14 years ago when 2 or 3 major vendors globally were offering ctp solutions, today there are over 40 different solutions to move away from film.

Be careful talking to any supplier that can only offer one type of CTP solution it may not be the best one for your company. Hambleside can offer different CTP solutions that will best suit your requirement now and in the future.

Film & CTP Plates

Hambleside offers a huge selection of popular Agfa Film / Plates, Kodak & Fuji Plates. Please contact us with your enquiry on +44 (0)2392 354930 or export@hambleside.co.uk

“At Hambleside International we always strive to continue be the very best in what we do”

Today's Print Market is Challenging

But still a good time to look at different products. More and more printers are buying the Heidelberg MO printing press for one important reason - PROFITS

The Heidelberg MO is an excellent printing machine for the printer looking to upgrade from a KORD 64, with a print paper size of 480 x 650 mm and plate size of 650 x 550mm and similar features to the KORD 64 the Heidelberg MO printing machine requires very little training to operate.

Presses' are available multi-colour with pin register system offering very quick 4 colour make ready. Print run speeds up to 13,000 Impression per hour. Fast stop / start up's with minimal waste to regain colour and damp. The Heidelberg MO printing press will increase your print quality and Production. From the moment you choose Hambleside to supply your next piece of print machinery you know you are in good hands. Printing can become less challenging and more profitable.

We have a selection of excellent quality Heidelberg MO's presses just come available from single colour to multi-colour at very good prices.

A name you can depend on!

HAMBLESIDE
INTERNATIONAL
TOTAL PRINT SOLUTIONS

Providing high quality and innovative products we can create real value for our customers.

Combine this with our industry knowledge detailed understanding of our products and 40 years supplying the West African printing market you have a supplier that can make a significant difference to any printer who is looking to gain a technical advantage at a competitive price in a challenging print market.

Visit www.hambleside-international.co.uk or contact us with your enquiry to see how we can help.

Refurbished Densitometers

Hambleside International have a selection of Refurbished and Ex-demonstration Densitometers for sale at discounted prices offering great savings

Any printing process from the simplest black and white work to complex colour work will benefit from the use of a densitometer. You might manage without one, but your printed product will never have the consistency and quality that you would get through the use of densitometry.

The densitometer provides you with information that will guide and help in the decisions you make as you print a job.

Using a densitometer helps you control your print process from beginning to end, with improved results quality and consistency, while reducing costs.

We have a selection of densitometer models available, all easy to use for every application and these are a must have tool for printers. Offering accurate information, CMYK density and dot gain etc.

Short Runs & Turnaround Times

For some time these matters have been problems for the local printer, and in the current difficult printing environment the difficulty of price competition is a real problem.

But now this is not a great problem for you, because Hambleside has solutions that can help you.

We can provide you with the equipment to achieve high quality, producing Short run print jobs in very quick turnaround time.

If you focus on improving print quality and service, you will be trusted by your customers they will like the quality and service and not get caught up in price wars.

Hambleside should be your clear choice

We have been assisting commercial printers for over 40 years in West Africa, giving Hambleside International the experience that matters when you are purchasing your next printing equipment.

Operating in the supply of used and reconditioned printing equipment for so many years, has given us the opportunity to develop outstanding relationships with major used equipment suppliers here in the UK and in Europe. This relationship has allowed us to have first knowledge of equipment currently available and coming available at end of lease.

Collectively, we have a large choice of equipment available to offer you that our competitors have not. We can provide you with used pre-press equipment, offset printing equipment or finishing equipment, that will best meet your needs now and in the future. All offered with training, installation and warranty.

It's best to contact us directly with your equipment needs as we can only advertise a small amount of equipment available on our website. We look forward to helping you.

Computer to Film

Because falling demand has halted the development and sales of new imagesetters, many companies who still rely on film for their litho, screen, flexo and specialist printing process may need a high quality alternative.

Hambleside has the perfect, cost effective answer!

The Inkjet imagesetter solution which combines the quality and versatility, 'best-in-

class' components to produce film separations with excellent dot reproduction. Plus, a direct to film, clean and chemical free process, this compact system doesn't need a processor or a darkroom and is fast and easy to use.

This solution helps you control your pre-press process, with improved results and consistency.

No Darkroom, No Processor or Chemistry, No Hassle! Instant-Dry, inkjet coating gives maximum densities, Excellent dot sharpness, microfine lines, perfect solids each and every time, Excellent value for money and fast production
