First Rehoboth invest in ECRM MAKO 4x CTP

First Rehoboth, is proud to announce the company's latest investment with the purchase of a complete ECRM Mako computer to plate system.

First Rehoboth CEO Adetola Olabajo took delivery ahead of schedule on March 25th 2015. Company owner Adetola Olabajo said: "This ECRM CtP system will help us respond to the increasing demand for faster and better quality plates also eliminating the need of film. Hambleside have been excellent from the start of our talks, they offered the best possible advice, price, and service and support also the ECRM Mako's technical features and specifications meet our and our customers' demands.

This April will see the CTP system completely installed and the operators fully trained. This investment was very necessary to allow the company to increase its capacity to meet our growing customer demand. Apart from our own production work, we will be offering a very economical and fast plate making service to printers in Lagos.

Stephen Harris our International Sales Manager said "The decision for First Rehoboth to buy a CtP system from Hambleside International is another endorsement of the company's expertise and knowledge in the pre press area, we are confident that Detola will be delighted with his new investment, Any company looking to invest in Computer to plate systems should make Hambleside their first choice, we offer many different ctp solutions and sell what is best for your companies requirements now and in the future"

In this Edition of Imprint

- First Rehoboth Mako 4X CTP
- Refurbished Large Format Printers
- Choice of Printing Blankets
- Matching PANTONE Colours
- Highwater CTP for Sale

HOT DEAL!! Hambleside CTP Scrappage Scheme

Hambleside wants to help customers upgrade their pre-press systems with the introduction and launch of the Hambleside Imagesetter scrappage scheme.

Huge savings are available when you scrap your old imagesetter and buy a CTP system from Hambleside. If you currently own a Imagesetter that is old, broken, high maintenance, irreparable, rendered useless due to obsolete parts or becoming expensive to run then it qualifies for the Hambleside Scrappage Scheme.

If you register an interest on our website - to replace your image-setter in 2015 with a Hambleside CTP System, you could receive a contribution towards your CTP system. Because CTP technology is now widely accepted globally, the market of the traditional plate making equipment and the consumable materials are greatly shrinking.

The manufacturing of film related equipment has slowed down or stopped altogether. This affects a range of equipment including the imagesetters, film processors, plate processors, plate exposure systems. According to some industry experts, film production will no longer exist in the future with some major global manufactures already pulling out of film manufacture.

Conventional plate production featured by imagesetter, film and PS plate will not be able to keep its position in pre-press industry for much longer, the sales turnover of computer to plate machines and related products such as inkjet imaging systems are experiencing tremendous growth globally.

Whilst conventional methods using film are declining and internationally renowned pre-press suppliers and plate manufacturers have all developed full line of CTP products.

Computer to Plate technology's time has come. It was only just over 14 years ago when 2 or 3 major vendors globally were offering ctp solutions, today there are over 40 different solutions to move away from film.

Be careful talking to any supplier that can only offer one type of CTP solution it may not be the best one for your company. Hambleside can offer different CTP solutions that will best suit your requirement now and in the future.

Film & CTP Plates

Hambleside offers a huge selection of popular Agfa Film / Plates, Kodak & Fuji Plates. Please contact us with your enquiry on +44 (0)2392 354930 or stephen@hambleside.co.uk

A Wide Choice of Printing Blankets for your presses

The choice of printing and coating blankets plays a crucial role in determining the quality of the finished printed product.

Hambleside has a diverse selection of high quality printing blankets and coating blankets designed to achieve the perfect printed image and enhance the process of printing on presses.

Exact dot reproduction; rich, even solids; quick sheet and web release; and reduced piling - all of this is achieved with the aid of Hambleside blankets. Excellent smash resistance and gauge stability guarantee top performance. And this quality pays off, as printers who use optimum printing and coating blankets work much more efficiently and economically!

Additional value from Hambleside includes technical information on machine packing requirements and torquing numbers.

Simply the best way to match **PANTONE Colours**

The PANTONE Formula Scales have been designed specifically for mixing inks to match PANTONE Colours. They are easy to use, accurate, and tough enough to stand up to the ink room environment. They have been proven by thousands of printers around the world to deliver substantial benefits.

Whatever the size of your printing operation, or your requirements for special colours, there is a PANTONE Formula Scale to suit your requirements. Not only will it offer you great convenience, help you to improve and maintain colour quality, but is almost certain to save you money as well.

The key is the unique combination of accurate digital weighing scales and computerized electronics, with all of the PANTONE Formulas stored in the scale memory. You just key in the PANTONE Number and quantity of ink required, then step through the weighing sequence - the PANTONE Formula Scale does the rest. The exact amount of each base ink required is calculated automatically, and the amount to add is shown on the display. You just add the base ink until the display shows zero.

Repeat for each of the components of the mix and you are finished. It's as simple as that! PANTONE Formula Scales are very easy to operate, with simple on-screen instructions, and include comprehensive error checking to make sure the mix is correct. There is even a progress bar to provide a quick visual check, so you can get close to the right amount of each base ink addition very quickly.

PANTONE Formula Scale 3 Printshop LC. We offer a range of models starting with the new low cost PANTONE Formula Scale 3 - Printshop LC. This is designed for smaller mixes, up to 1kg, and will be perfect for a small jobbing printer, or high street print shop, where small mixes and

fast turnaround are the order of the day.

All the latest PANTONE Formula Scale 3 models have a number advanced features, and are programmed with the formulas for ALL printable PANTONE Solid Colours. The scales come ready programmed with all of the colours in the PANTONE Formula Guide (even the fluorescents), plus those found in the latest versions of PANTONE Metallic Formula Guide and the PANTONE Pastel Formula Guide. Now all PANTONE Formula Scale 3 Models are programmed with the latest PANTONE Goe™ System Colour Range.

PANTONE Formula Scale Model PFS3 With 5kg mixing capacity, the standard PANTONE Formula Scale 3 will be ideal for most medium sized printers with an eye for quality results, and a wide range of customer requirements.

The PANTONE Formula Scale 3+ has even more features. These scales enable you to create and save up to 100 of your own custom formulas from PANTONE Bases, so you can easily repeat mixes you have de-

veloped for particular customers.

There is also a high resolution weighing mode to cope with those difficult mixes with very small components. This model is supplied with either 5kg or 10 kg weighing capacity.

For applications where you have many of your own formulas, the PANTONE Formula Scale 3i is fully programmable. As you would expect, it comes ready programmed with all of the PANTONE Formulas, but it will also store as many as 30,000 custom formulas, in up to 64 different ink systems.

FREE PC based 'Formula Master' software is provided enable you to enter and build up your own databases of colour ink formulations, then to download them to the scale. You can then enjoy the convenience and accuracy of using the PANTONE Formula Scale for mixing any colour ink for which you have a formula - no matter what it is or the ink system and bases used.

Not only do the PANTONE Formula Scales do a superb job of formulating inks, but they also offer considerable savings compared with other methods of achieving custom mixes.
